SENSE CHECK

Talk to real users while you build, straight from your coding agent.

check.testwithsenseai.com event code **TALKTOUSERS**

WHAT IT DOES

Ask your agent

Tell it what you want to learn. It sets up the check with you.

We call 3 testers

Finance professionals get a text, reply YES, and our AI interviewer calls them.

You get their answers

A summary and quotes from each call come straight back to your agent.

3	sense checks per team
3	testers per check
1	token for your whole team

WHAT TESTERS GET

THE TEXTS

Sent from our number

- “An interview is ready. Reply YES.”
- “Calling you now!” + a link to your product
- No product yet? Then it’s just the call

Outside the US: a browser call instead

THE CALL

AI phone interview, 10–15 minutes

- Rings within seconds of their YES
- Your product description is read word for word
- Under 7 minutes doesn’t count: we call someone else

You get: a summary and quotes per tester

Every sense check today is a phone interview. Testers never see your team name.

ONE CHECK PER BLOCK

1 · 12–1 PM

Test the idea

Send your idea and theme. Add a link or screenshots if you have them.

RESEARCH 50% | PRODUCT 50%

2 · 3–4 PM

Show what you built

Send a link or 1–3 screenshots, and a one-line description.

20% | PRODUCT 80%

3 · 6–7 PM

Ask your question

Send your own question and a description. Screenshots or a link are optional.

20% | PRODUCT 80%

SIGN UP

1. **Go to** check.testwithsenseai.com
2. **Enter** your team name and the event code
3. **Copy** the snippet for the tool you use
4. **Paste** it in, then restart the tool

EVENT CODE

TALKTOUSERS

Type it on the sign-up page

ONE TEAM, ONE TOKEN

Sign up once per team. One person does it, for everyone.

Everyone uses the same token. Share it with your teammates; you all see the same tests and checks.

It’s shown once. Save it somewhere your team can find it.

Lost it? Ask an organizer for a new one. Signing up again won’t work: the name is taken.

Keep it private. Anyone with it can spend your team’s 3 checks.

WHERE IT WORKS

Claude Code
One command to add it

Cursor
.cursor/mcp.json

Codex
~/.codex/config.toml

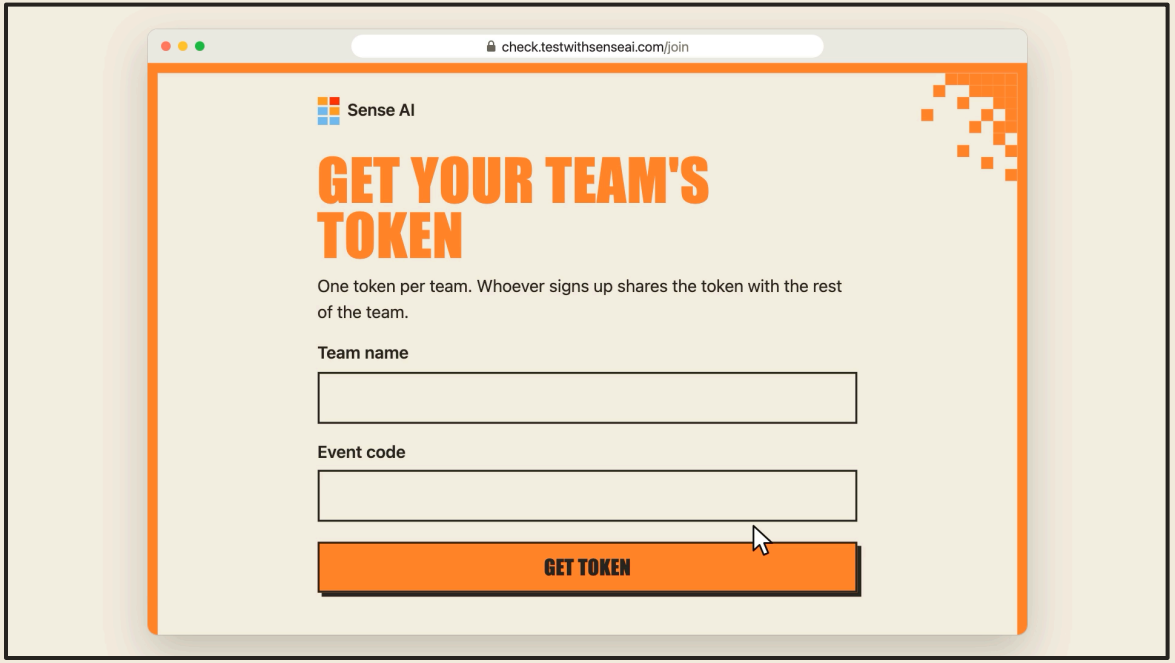

Windsurf / Devin Desktop
mcp_config.json

Devin
Add a custom MCP in settings

Base44
Builder plan or higher

Using something else? Anything that connects to remote MCP servers over HTTP with a header works: the sign-up page gives you the URL and header to paste.

SET UP IN CLAUDE CODE

Copy the Claude Code command from the sign-up page.

Run it in your project folder.

Restart Claude Code.

Check it: ask it to call list_tests. It should say 3 sense checks left.

WHAT YOUR AGENT ASKS FOR

PRODUCT DESCRIPTION

What it does, in your words. Testers hear it word for word, so describe it; don't give instructions.

WHO IT'S FOR

Your target user, like "accountants who close the books each month."

A LINK OR SCREENSHOTS

Your live link, or 1–3 screenshots if it isn't deployed. Hide team names, keys and client data.

YOUR THEME

One for the whole day: save time, build trust, or catch what humans miss.

WHAT TO SAY TO YOUR AGENT

BLOCK 1 · THE IDEA

“Run a sense check on our idea: AI that matches invoices to bank feeds. Theme: save time.”

BLOCK 2 · WHAT YOU BUILT

“Run our next sense check on our-app.com, or screenshot our 3 main screens.”

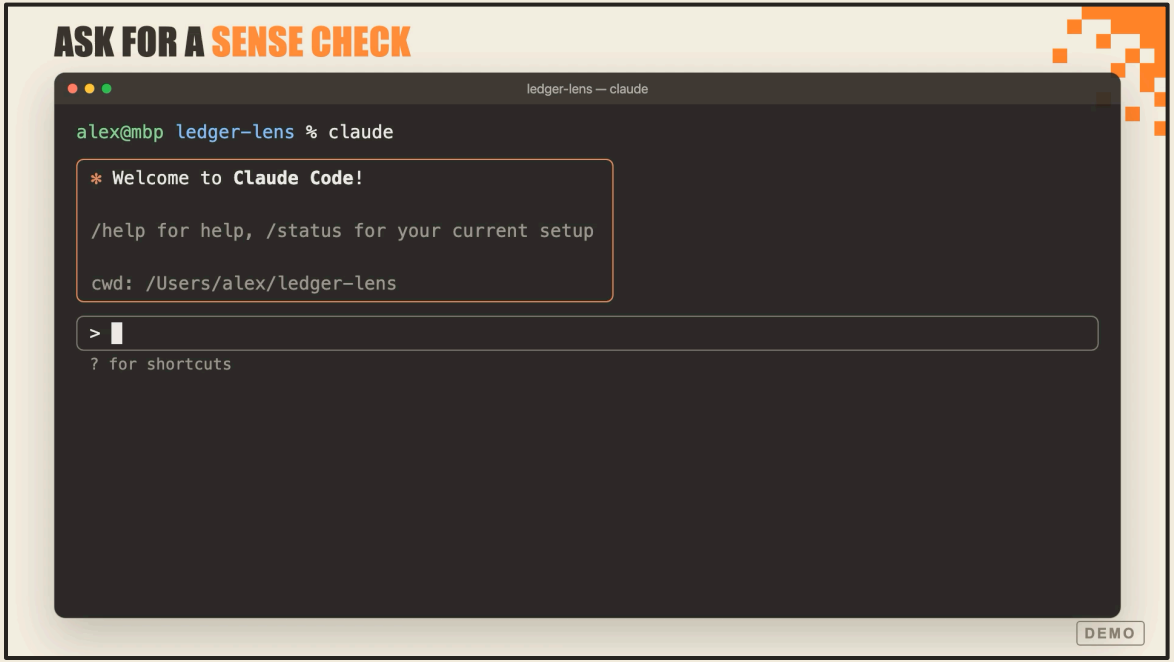

BLOCK 3 · YOUR QUESTION

“Our app is live at our-app.com. Ask testers: would you trust these matches without checking?”

CHECK IN

“How is our sense check going? Show me what testers said.”

RUN A SENSE CHECK

Ask for a sense check in plain words.

Answer its questions and open the preview.

Say launch. Testers get called within minutes.

Ask for results as calls finish: a summary and quotes per tester.

TIPS FOR GOOD ANSWERS

Confirm before launch

Each launch uses 1 of your 3 checks. Edits are free until then.

Open the preview

It’s the page testers open on the call. Check screenshots for keys and client data.

Ask open questions

“What would stop you from using this?” beats “Do you like it?”

Describe, don’t instruct

Testers hear your description word for word. Instructions get refused.

Results in about an hour

Calls start within minutes. A check closes after 3 calls or an hour.

Read every answer

Each summary is a real person reacting to what you built.

THE CHALLENGE

1 · PICK A THEME

Save time
A task that really eats their time.

Build trust
AI they'd rely on without checking every output.

Catch what humans miss
Mistakes that slip through today.

2 · PICK A FINANCE USER

Accountants and CPAs

Banking, lending and compliance

Financial analysts and FP&A

Finance ops and bookkeeping

Investment, markets and trading

Wealth and financial advisors

WHAT JUDGES LOOK FOR

01 · CREATIVITY

A fresh take, not the obvious build.

02 · REAL PAIN

A problem finance pros feel, in their own words.

03 · HIDDEN PROBLEM

Something no one sees unless they asked a user.

04 · USER FEEDBACK

What you changed after testers spoke, and why.

05 · WORKS LIVE

Demo the real product, not slides.

Bring the receipts: the tester quote that changed your build.

PRIZES

BRIGHT DATA · GRAND PRIZE

$750

Must use Bright Data
