Build something cool but build small, then spend your time refining it and thinking hard about how a real finance pro would use it. Sense AI wants to make even engineers love user testing: real people in minutes, never synthetic users.

Who you're building for (B2B: finance professionals)

These are your Sense Check testers.

Accountants and CPAs	Banking, lending, and compliance	Financial analysts and FP&A
Finance ops and bookkeeping	Investment, markets, and trading	Wealth and financial advisors

Pick one theme

- **1. Save time.** Build a small AI tool that saves a finance professional time on one specific task.
- **2. Build trust.** Make a tool that gets a skeptical finance professional to trust AI more.
- **3. Catch what humans miss.** Flag errors, risks, or compliance issues in finance work.

How the day works (all times PT)

- **10:30am** Hacking begins. Ship a working v1 by the first Sense Check at noon.
- **Sense Check rounds: 12–1pm, 3–4pm, 6–7pm.** Each team gets 1–3 real finance testers per round on a short 3-question test. Watch them use it.
- **Mentor hours: 11am–12pm, 2–3pm, 5–6pm.**
- Between rounds, iterate on what testers tell you.
- **8:00pm** Hacking ends. Submission deadline.
- **8:30pm** Judging begins.

Deliverable

- **1-3 Slide Pitch/presentation (will be presented if you make it to final round)**

What judges look for

- **Creativity.** A fresh take, not the obvious build.
- **Real pain.** A genuine problem finance pros actually feel.
- **A problem no one sees unless they asked.** Insight that only comes from talking to users.
- **Also counts:** changes you made from real user feedback, and it works live.

Rules of thumb

- **Go small:** one kind of user, one task.
- **Real feedback using Sense AI beats more features.**
- Show what you changed and why.
